## Data Warehousing and Data Mining : Concepts and Practical Techniques for IT Professionals

#### Index

## Chapter 1: Introduction to Data Mining

- 1.1 What is Data Mining?
- 1.2 Data Mining as a step in the process of Knowledge discovery
- 1.3 What kind of data can be mined?
- 1.4 Data Mining Functionalities
- **1.5 Data Mining for IT professionals**
- 1.6 Major Issues of Data Mining
- 1.7 Statistical description of data
- 1.8 Data visualization

#### **Chapter 2: Data Preprocessing**

- 2.1 An overview of Data preprocessing
- 2.2 Data Cleaning
- 2.3 Data Integration
- 2.4 Data Reduction
- 2.5 Data Transformation and Data Discretization

#### **Chapter 3: Data Warehousing Fundamental Concepts**

3.1 What is a Data warehouse?
3.2 Data warehouse usage for IT Professionals
3.3 Need of separate data warehouse
3.4 A Multi-tiered Architecture of Data warehousing
3.5 Various Models of Data warehouse: Enterprise warehouse, Datamart, and virtual warehouse
3.6 What is meant by ETL?
3.7 Metadata Repository

# Chapter 4: Data Warehouse: Modeling and Design

- 4.1 A Multidimensional Data Model
- 4.2 Schemas for Multidimensional Data Model

- 4.3 OLAP operations
- 4.4 Data warehouse Design process

## **Chapter 5: Data Warehouse Implementation**

- 5.1 The compute cube operator
- 5.2 Partial Materialization
- 5.3 Bitmap and join index for OLAP data
- 5.4 Efficient processing of OLAP queries
- 5.5 Data generalization using Attribute-Oriented Induction

## Chapter 6: Mining Frequent Patterns, Associations and Correlations

6.1 Fundamental concepts

6.2 Frequent itemset Mining methods

# Chapter 7: Classification

7.1 Basic concepts
7.2 Decision Tree induction
7.3 Bayes Classification Methods
7.4 Rules based classification
7.5 SVM
7.6 Lazy learners

# Chapter 8: Cluster Analysis

8.1 Basic concepts
8.2 Partitioning Methods
8.3 Hierarchical Methods
8.4 Density based Methods
8.5 Grid based Methods

# **Chapter 9: Outlier Detection**

9.1 Basic concepts9.2 Outlier Detection Methods
